Twist & Twist R

Customize your mobility

Twist your possibilities

Watch the video

Twist version

One single model as a basis for five possible configurations.

- A range of plug & play accessories can transform the Twist to suit the user's different driving and mobility needs.
- It can be mounted at the **rear** on rigid and folding wheelchairs with wheels up to 24 inches. It can be mounted at the **front** on all types of wheelchairs, with all wheel sizes.
- Light and compact, with a weight of only 7.3 Kg, it is a faithful travelling companion that can be carried as hand luggage thanks to its special removable 144 Wh battery.
- Twist is intelligent: it automatically recognises the type of Bluetooth command in use, the mounting position and changes the configuration of the driving parameters accordingly.
- By using the free Web App Klaxon®, it is possible to monitor the status of the Twist and customise the driving parameters according to specific needs, all while the device is in use.

Mounting options:

- Rear mounting
- Rear mounting in caregiver version
- Front mounting
- Front mounting in caregiver version
- Driving with handlebar.

Standard equipment

Flaybag Twist

Directionality system

Removable battery

Rear led light

Front led light

Accessories for Twist version

Bluetooth Controller - Right Side code KT-CTR-DX-0000

Bluetooth Controller - Left Side code KT-CTR-SX-0000

The Controller is essential when driving the Twist-equipped wheelchair with handrims. Four different speeds can be set with a slight pressure on the selector. The large button on the side acts as an emergency stop when pressed quickly and as a "start & stop" if the button is held down for a longer period and then released.

The quick fixing system, supplied as standard, allows the Controller to be positioned either to the right or left side of the wheelchair frame. The LED bar provides constant information on the Controller's battery charge level (autonomy of 10 hours of continuous use).

Handlebar Control code KT-25-0000

The Handlebar Control can be mounted and removed without the use of any tools in a matter of seconds. It can be folded for an easier transportation. It is equipped with both mechanical and electronic brakes and its LED bar provides constant information on the battery charge level (autonomy of 10 hours of continuous use).

Caregiver Controller code KT-PA-0000

The Caregiver Controller can be easily fixed to the push handles of all wheelchair models without the use of any tools. The Caregiver Controller is user-friendly: a simple push on the accelerator is all that is needed to activate the motor.

Releasing the accelerator lever, even accidentally, will instantly stop the motor thrust.

The LED bar provides constant information on the Caregiver Controller's battery charge level (autonomy of 10 hours of continuous use).

Twist's rear mounting frame code KT-16-0000

This frame allows the Twist to be installed at the rear in seconds and without the use of any tools.

It is equipped with a front stand that allows the Twist to be easily placed on the ground in the correct mounting position.

Twist R version

Compared to the Twist version, the Twist-R can only be mounted at the rear.

- Twist R can be installed on rigid and folding wheelchairs with 24 and 26-inch wheels.
- It is lighter than the Twist: it weighs only 6.2 kg.
- Performant on uphill on slopes up to 15%(*).
- Practical and intuitive steering via handrims.
- The Bluetooth Controller allows the selection between 4 different speeds and the immediate stop of the motor thrust.
- Thanks to its compactness and to the special **Caregiver Controller** it is perfect to be driven by an assistant.

Mounting options:

- Rear mounting
- Rear mounting in assistant version

(*) Tests performed with a maximum user weight of 80 kg

Accessories for Twist version

Bluetooth Controller Right Side
code KT-CTR-DX-0000

Bluetooth Controller Left Side
code KT-CTR-SX-0000

The Controller is essential when driving the Twist-equipped wheelchair with handrims. Four different speeds can be set with a slight pressure on the selector.

The large button on the side acts as an emergency stop when pressed quickly and as a "start & stop" if the button is held down for a longer period and then released.

The quick fixing system, supplied as standard, allows the Controller to be positioned either to the right or left side of the wheelchair frame. The LED bar provides constant information on the Controller's battery charge level (autonomy of 10 hours of continuous use).

Caregiver Controller
code KT-PA-0000

The Caregiver Controller can be easily fixed to the push handles of all wheelchair models without the use of any tools. The Caregiver Controller is user-friendly: a simple push on the accelerator is all that is needed to activate the motor.

Releasing the accelerator lever, even accidentally, will instantly stop the motor thrust.

The LED bar provides constant information on the Caregiver Controller's battery charge level (autonomy of 10 hours of continuous use).

✓ **Twist** Rear mounting:
 ✓ **Twist R** operation via Controller

Watch the video

The rear installation can be done with either the Twist or Twist R version.

- It is the most compact solution offered by the Twist range, as the installed device is in the centre and is nearly invisible underneath the wheelchair.
- It is easy to connect to the wheelchair in manual or automatic mode. (Scan the QR code to watch the video).
- Its small dimensions, low weight, and the 144 Wh battery allow it to be transported anywhere as hand luggage, even in an aeroplane.
- Practical and intuitive steering via handrims.
- The Bluetooth Controller manages 4 different speeds, up to 6Km/h^(**), and the immediate stop of the motor's propulsive thrust.
- The motor's propulsive thrust can also be stopped by acting directly on the handrims and without the use of the Controller. This ensures a safe ride and the complete control all the time.
- Performs well uphill, even on high slopes.
- The Rear Linking System Klaxon® allows the wheelchair to be wheeled up in order to climb or descend steps.
- The driving experience can be customised via Web App Klaxon®.

(*) Maximum rated slope 15% and maximum user weight of 80 Kg.

(**) In certain countries/markets, the maximum speed is 10 Km/h.

 **Twist** Front mounting:
 **Twist R** operation via Controller

Watch the video

Only the Twist version can be installed at the front.

- This configuration is recommended especially for outdoor use.
- Steering is done by acting on the handrims.
- Driving is safe even on irregular and rough terrains due to the fact that the wheelchair's castor wheels are lifted.
- The Bluetooth Controller allows the selection between 4 speeds up to 6 km/h.
- It can be operated and braked not only with the Bluetooth Controller, but also by acting on the handrims of the wheelchair.
- The Electronic Braking and the Emergency Braking, via Bluetooth Controller, ensure a high level of driving comfort and safety, even when driving downhill.
- Automatically maintains the selected speed even when going downhill.
- It is equipped with a system which maintains the direction even on counterslopes.
- A sensor recognises the steering angle and automatically and progressively reduces the cornering speed, ensuring a high standard of safety at all times.
- The driving experience can be customised via Web App Klaxon®.

 **Twist** Front mounting:
 **Twist R** operation via Handlebar

Watch the video

The handlebar installation is only possible on the TWIST version.

- Thanks to the handlebar accessory it is possible to ride long distances in total safety and on any route.
- It is a perfect travelling companion because, thanks to its modularity, it can be carried anywhere, even as hand luggage on an aeroplane.
- By installing the handlebar accessory, the maximum speed of the Twist device automatically increases to 20Km/h(**).
- Driving is safe even in any condition due to the fact that the wheelchair's castor wheels are lifted
- The handlebar is adjustable in extension, is foldable and can be installed and removed in seconds.
- The handlebar accessory features an electronic brake and a mechanical disc brake for a safe stop in all riding conditions.
- The system also allows to be driven in reverse in order to overcome some particularly steep climbs.
- The driving experience can be customised via Web App Klaxon®.

(*) Maximum rated slope 15% and maximum user weight of 80 Kg

(**) The maximum permitted speed depends on the regulations in force in the countries of use.

Bluetooth handlebar control

 **Twist** Rear mounting:
 **Twist R** operation via Caregiver Controller
 by an assistant

Watch the video

By simply installing the Caregiver Controller the Twist or Twist R can be overted into the assistant version.

- The Caregiver Controller can be installed and removed in seconds and fits all wheelchair models.
- **Twist** or **Twist R**, when mounted at the rear, are designed not to get in the way of the driver, ensuring that the assistant remains in control even on steep slopes.
- Only the **Twist** version can be mounted also at the front. This installation allows the front castor wheels of the wheelchair to be raised in order to ride in complete safety in the presence of sudden obstacles and particularly rough paths. In this configuration, the electronic braking assists the caregiver when driving downhill.
- The Caregiver Controller is user-friendly: a simple push on the accelerator is all that is needed to activate the motor.
- Releasing the accelerator lever, even accidentally, will instantly stop the motor thrust.
- The LED bar provides constant information on the Caregiver Controller's battery charge level (autonomy of 10 hours of continuous use).
- The driving experience can be customised via Web App Klaxon®.

(*) Maximum rated slope 15% and maximum user weight of 80 Kg

Linking system Klaxon®

For front mounting

Central Linking System Klaxon®

The central linking system, patented by Klaxon, fits all types of rigid and folding wheelchairs with any type and size of wheel. It allows the Twist to be quickly and easily connected to the wheelchair and raises the wheelchair's castor wheels off the ground. It can be completely removed in seconds and is also available in a version for tetraplegic users.

Lateral Linking System Klaxon®

The lateral linking system can only be used on rigid wheelchairs. It allows the Twist to be quickly and easily connected to the wheelchair and raises the wheelchair's castor wheels off the ground.

16

For rear mounting

Rear Linking System Klaxon® for rigid wheelchair

The system allows the Twist or Twist-R to be connected to the wheelchair in seconds, even by the user himself in manual or automatic mode (watch video). Its special configuration allows the wheelchair to be wheeled up, by the user or the caregiver, in order to overcome obstacles.

Rear Linking System Klaxon® for folding wheelchair

Klaxon has developed a kit especially designed for folding wheelchairs that can be easily installed and removed in seconds. Its special configuration allows the wheelchair to be wheeled up, by the user or the caregiver, in order to overcome obstacles.

Web App Klaxon®

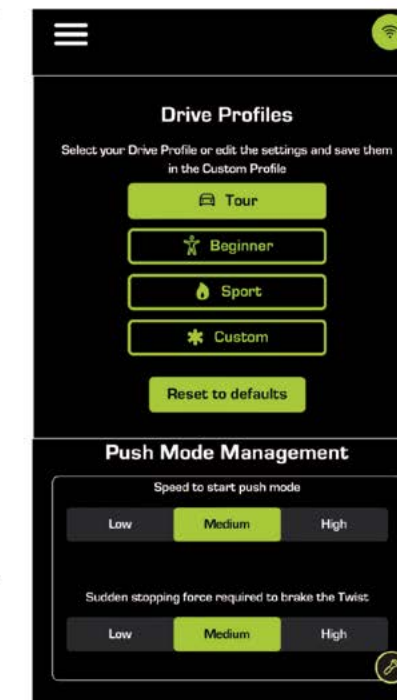

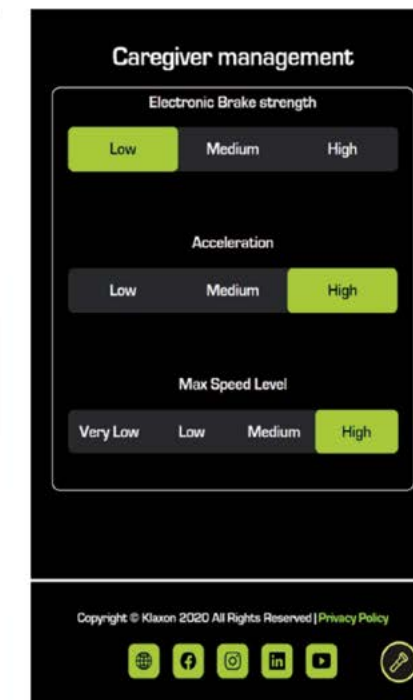

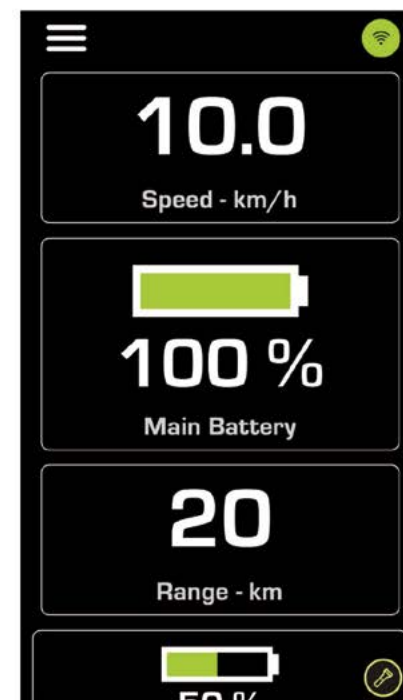

Go to the Web App

Technology at your fingertips

Thanks to the Web App Klaxon®, which is available for free, the users can monitor the status and performance of their Twist and Twist-R in real time and perform the following tasks:

- Check the charge status of the vehicle battery and of the Bluetooth control in use.
- Monitor the performance in real time.
- Monitor the remaining available km of autonomy.
- Receive and install functional updates provided by Klaxon.
- Choose from different driving profiles and customise the performance of their Twist according to their own style and needs.
- Access to all up-to-date informative materials and user manuals.
- Access the system diagnosis function and find the nearest service centre.
